Beginning January 2026

1. Scan QR code to start parking. No need to download an app.

2. Add your license plate # and credit card for contactless payment.

3. At the end of your parking session, just drive out.

How this works

This parking facility uses pay-by-plate technology. Each time your vehicle drives through the entrance and exit, a camera takes a photo of your license plate and records a timestamp to facilitate the visit. When you drive out, your account will automatically be charged for the duration of your parking session. Next time you visit a Metropolis parking facility, no need to scan a code or enter a license plate – just drive in and drive out.
